

Labor force characteristics by race and ethnicity, 2019

December 2020 | Report 1088

In 2019, the overall unemployment rate (jobless rate) for the United States was 3.7 percent, however, the rate varied across race and ethnicity groups. Among the race groups, jobless rates were higher than the national rate for Blacks or African Americans (6.1 percent), American Indians and Alaska Natives (6.1 percent), and people categorized as being of Two or More Races (5.3 percent). Jobless rates were lower than the national rate for Asians (2.7 percent), Native Hawaiians and Other Pacific Islanders (3.2 percent), and Whites (3.3 percent). The rate for people of Hispanic or Latino ethnicity, at 4.3 percent, was higher than the rate of 3.5 percent for non-Hispanics.

Labor market differences among the race and ethnicity groups are associated with many factors, not all of which are measurable. These factors include variations in educational attainment across the groups; the occupations and industries in which the groups work; the geographic areas of the country in which the groups are concentrated, including whether they tend to reside in urban or rural settings; and the degree of discrimination encountered in the workplace.

This report describes the labor force characteristics and earnings patterns among the largest race and ethnicity groups living in the United States—Whites, Blacks, Asians, and Hispanics—and provides detailed data through a set of supporting tables. The report also contains a limited amount of data on American Indians and Alaska Natives, Native Hawaiians and Other Pacific Islanders, people who are of Two or More Races, detailed Asian groups, and detailed Hispanic groups. Because of their relatively small sample sizes, estimates for these additional groups are not included in all tables.

The data were obtained from the Current Population Survey (CPS), a monthly survey of about 60,000 households that is a rich source of information on the labor force. For definitions of terms and concepts used in this report, see the technical notes. Additional information about the CPS can be found at www.bls.gov/cps/documentation.htm.

The sections that follow highlight some of the major findings on the labor force characteristics of race and ethnicity groups in 2019.

Composition of the labor force

By race, Whites made up the majority of the labor force (77 percent). Blacks and Asians constituted an additional 13 percent and 6 percent, respectively. American Indians and Alaska Natives made up 1 percent of the labor force, while Native Hawaiians and Other Pacific Islanders accounted for less than 1 percent. People of Two or More Races made up 2 percent of the labor force. (See table 1.)

Among Asians participating in the labor force, the largest group was Asian Indian, making up 24 percent of all Asians. Chinese made up 22 percent, followed by Filipinos (14 percent), Vietnamese (11 percent), Koreans (8 percent), and Japanese (5 percent). The remainder—17 percent—was classified as Other Asians, a category that includes individuals

in an Asian group not listed above—such as Hmong, Laotian, Thai, Pakistani, and Cambodian—and those who were of two or more Asian groups. (As calculated from the data in table 2.)

People of Hispanic or Latino ethnicity, who may be of any race, made up 18 percent of the total labor force. The majority of Hispanics in the labor force were White (89 percent), Black (5 percent), and Asian (1 percent). By detailed ethnicity, the majority of Hispanics in the labor force were Mexican (61 percent). Central Americans made up another 10 percent, over a third of whom were Salvadorans. Eight percent of Hispanics in the labor force were Puerto Rican, and 7 percent were South American. People of Cuban and Dominican ethnicity each represented 4 percent of the Hispanic labor force. An additional 5 percent were classified as Other Hispanic or Latino. (See table 2.)

Labor force participation

Among the race and ethnicity groups, Native Hawaiians and Other Pacific Islanders (68.4 percent), people of Two or More Races (67.1 percent), and Hispanics (66.8 percent) had the highest labor force participation rates. The participation rate for Asians was 64.0 percent; Whites, 63.0 percent; Blacks, 62.5 percent; and American Indians and Alaska Natives, 60.8 percent. (See tables 1, 2, 3, 4, and 4A, and chart 1.)

Chart 1. Labor force participation rates by race and Hispanic or Latino ethnicity, 2019 annual averages

Hover over chart to view data.

Note: People whose ethnicity is identified as Hispanic or Latino may be of any race.

Source: U.S. Bureau of Labor Statistics, Current Population Survey (CPS).

Among adult men (20 years and older) in the largest race and ethnicity groups, Hispanics (80.2 percent) were more likely to participate in the labor force than were the other groups, and Blacks (68.1 percent) were the least likely. The labor force participation rate for Asian men (75.1 percent) was higher than the rate for White men (71.8 percent). Among adult women, Blacks (62.5 percent) were more likely to participate in the labor force than were Hispanics (60.4 percent), Asians (59.3 percent), and Whites (57.9 percent). Among teenagers (16 to 19 years), Asians (21.6 percent) were less

likely to participate in the labor force than were Whites (37.5 percent), Hispanics (32.2 percent), and Blacks (30.1 percent). (See table 3.)

Employment

The employment–population ratio (the proportion of the population that is employed) ranged from 57.1 percent for American Indians and Alaska Natives to 66.2 percent for Native Hawaiians and Other Pacific Islanders. The employment–population ratio was 63.9 percent for Hispanics, 63.6 percent for individuals of Two or More Races, 62.3 percent for Asians, 61.0 percent for Whites, and 58.7 percent for Blacks. (See tables 1, 2, 3, 5, and 5A.)

Among adult men (20 years and older) in the largest race and ethnicity groups, Hispanics (77.4 percent) continued to have the highest employment–population ratio. Black men (64.0 percent) had the lowest, also continuing a longstanding pattern. The employment–population ratios for Asian adult men and White adult men were 73.1 percent and 69.6 percent, respectively. Among adult women, the ratios showed less variation across the major race and ethnicity groups: 59.4 percent for Blacks, 57.9 percent for Hispanics, 57.8 percent for Asians, and 56.2 percent for Whites. (See table 3.)

The employment–population ratio among teenagers (16 to 19 years) continued to be higher for Whites than for Hispanics, Asians, or Blacks. The ratio for White teens (33.2 percent) was about 13 percentage points higher than the ratio for Asian teens (19.8 percent), about 9 percentage points higher than for Black teens (23.9 percent), and about 6 percentage points higher than for Hispanic teens (27.2 percent).

Educational attainment

Among people 25 years and older, the share of the labor force with at least a high school diploma was more than 90 percent each for Whites, Blacks, and Asians. Seventy-seven percent of Hispanics in the labor force had attained at least a high school diploma. Asians were the most likely of the groups to have graduated from college: 65 percent of Asians in the labor force had a bachelor’s degree and higher, compared with 41 percent of Whites, 32 percent of Blacks, and 22 percent of Hispanics. (As calculated from the data in table 6 and chart 2.)

Chart 2. Educational attainment of the labor force age 25 and older by race and Hispanic or Latino ethnicity, 2019 annual averages

 Note: People whose ethnicity is identified as Hispanic or Latino may be of any race.
 Data may not sum to 100 percent because of rounding.
 Source: U.S. Bureau of Labor Statistics, Current Population Survey (CPS).

Higher levels of education are generally associated with a greater likelihood of employment, and a lower likelihood of unemployment. For almost all major race and ethnicity groups, jobless rates for people with a bachelor's degree and higher were lower than for other levels of educational attainment. (See table 6.)

Individuals with higher levels of education are more likely to be employed in higher paying jobs—such as those in management, professional, and related occupations—than are individuals with less education. Median earnings of people 25 years and older increased with educational attainment across almost all major race and ethnicity groups. Among full-time wage and salary workers, median usual weekly earnings for Blacks (\$1,110) and Hispanics (\$1,155) with a bachelor's degree and higher were lower than for Whites (\$1,380) and Asians (\$1,579). (See table 17.)

Occupation

Fifty-five percent of employed Asians worked in management, professional, and related occupations—the highest paying major occupational category—compared with 41 percent of employed Whites, 32 percent of employed Blacks, and 23 percent of employed Hispanics. (See table 7 and chart 3.)

Among employed men, 57 percent of Asians worked in management, professional, and related occupations, compared with 38 percent of Whites, 26 percent of Blacks, and 19 percent of Hispanics. About 20 percent of employed Black and Hispanic men worked in service occupations, compared with 13 percent and 12 percent of employed White and Asian men, respectively. Employed Black and Hispanic men also were more likely than White and Asian men to work in production, transportation, and material-moving occupations. Twenty-seven percent of employed Hispanic men worked in natural resources, construction, and maintenance occupations, compared with 18 percent of White men, 11 percent of Black men, and 6 percent of Asian men. (See table 7.)

Employed Asian women were more likely than other employed women to work in management, professional, and related occupations: 53 percent of Asian women, compared with 46 percent of White women, 37 percent of Black women, and 29 percent of Hispanic women. Among employed women, 60 percent of Hispanics worked in two major occupational groups—service occupations and sales and office occupations—compared with 54 percent of Blacks, 47 percent of Whites, and 40 percent of Asians.

Hispanics accounted for 18 percent of total employment but were substantially overrepresented in several detailed occupational categories, including painters, construction and maintenance (56 percent); miscellaneous agricultural workers (54 percent); and maids and housekeeping cleaners (49 percent). Blacks made up 12 percent of all employed workers, but were substantially overrepresented in several detailed occupational categories, including nursing, psychiatric, and home health aides (37 percent); security guards and gaming surveillance officers (30 percent); and taxi drivers and chauffeurs (30 percent). Asians accounted for 7 percent of all employed workers but made up a much larger share of workers in several occupation categories, including miscellaneous personal appearance workers (59 percent);

software developers, applications and system software (38 percent); and physicians and surgeons (18 percent). Whites made up 78 percent of all employed people, and accounted for 97 percent of farmers, ranchers, and other agricultural managers; construction managers (91 percent); and carpenters (89 percent). (See table 8.)

Industry

Among employed men, Hispanics were more likely to work in the construction industry (21 percent) than were Whites (14 percent), Blacks (7 percent), or Asians (3 percent). Employed Black men were more likely than employed men of other race and ethnicity groups to work in transportation and utilities (14 percent). Twenty-two percent of employed Asian men worked in professional and business services, higher than the shares of White men (14 percent), Black men (12 percent), and Hispanic men (12 percent). A large share of employed women across all race and ethnicity groups worked in education and health services: Blacks (41 percent), Whites (36 percent), Asians (31 percent), and Hispanics (31 percent). (See table 9.)

Families and parents

Eighty-eight percent of both Asian families and Hispanic families had at least one family member employed. About 80 percent of White and Black families had at least one family member employed.

Families maintained by women (no opposite-sex spouse present) accounted for 41 percent of Black families, 25 percent of Hispanic families, 15 percent of White families, and 12 percent of Asian families. Among families maintained by women without a spouse present, Asian families were the most likely to have an employed family member (85 percent). In comparison, 77 percent of Black families, 79 percent of White families, and 83 percent of Hispanic families that were maintained by women had at least one employed family member. In general, families maintained by women were less likely than married-couple families or families maintained by men to have an employed family member. (As calculated from the data in table 10.)

Among mothers with children under 18 years old, Black mothers (77.6 percent) were more likely to be in the labor force than White mothers (71.9 percent), Asian mothers (65.8 percent), or Hispanic mothers (64.9 percent). (See table 11.)

Across all race and ethnicity groups, fathers with children under 18 years were much more likely to be in the labor force than were mothers with children under 18 years. Labor force participation rates for these fathers were 94.1 percent for White men, 93.8 percent for Asian men, 93.8 percent for Hispanic men, and 88.6 percent for Black men.

Unemployment

In 2019, the unemployment rate averaged 6.1 percent for Blacks, 6.1 percent for American Indians and Alaska Natives, 5.3 percent for people of Two or More Races, 3.3 percent for Whites, 3.2 percent for Native Hawaiians and Other Pacific Islanders, and 2.7 percent for Asians. The unemployment rate was 4.3 percent for Hispanics. With the exception of Whites, the remaining groups experienced unemployment rates that were the lowest in the history of each series. (See tables 1, 2, 3, 12, and 12A, and charts 4 and 5.)

 Data may not sum to 100 percent because of rounding.
 Data for Asians are available only since 2000.
 Source: U.S. Bureau of Labor Statistics, Current Population Survey (CPS).

Among adult men (20 years and older) in the largest race and ethnicity groups, Blacks were the most likely to be jobless (with an unemployment rate of 6.0 percent), while Asians (2.6 percent) were the least likely. The jobless rate for White men (3.0 percent) was lower than the rate for Hispanic men (3.5 percent). Among adult women, Blacks (5.1 percent) were also the most likely to be jobless, while Asians (2.5 percent) were the least likely. The jobless rate for White women (3.0 percent) was lower than the rate for Hispanic women (4.1 percent). Among teenagers (16 to 19 years), Blacks had the highest unemployment rate, at 20.7 percent, compared with 15.4 percent for Hispanics, 11.5 percent for Whites, and 8.2 percent for Asians. (See table 3.)

Unemployed Blacks and Asians experienced longer periods of unemployment than did Whites and Hispanics. The median duration of unemployment for Blacks and Asians was 10.8 weeks and 9.7 weeks, respectively, whereas the figure was 8.6 weeks for Whites and Hispanics. (See table 13.)

Of the 6.0 million people unemployed in 2019, 46 percent were job losers (workers who were on temporary layoff, lost their jobs permanently, or who completed temporary jobs). Reentrants to the labor force (30 percent), job leavers (14 percent), and new entrants (10 percent) accounted for the rest of the unemployed. Of the total unemployed for each major race and ethnicity group, 48 percent of Whites and 47 percent of Hispanics were job losers, compared with 43 percent of Blacks and 41 percent of Asians. Sixteen percent of unemployed Asians, 12 percent of unemployed Hispanics, 11 percent of unemployed Blacks, and 9 percent of unemployed Whites were new entrants to the labor force. (See table 14.)

Not in the labor force

As calculated from the data in table 15, Blacks made up 13 percent of the civilian labor force, and 23 percent of people marginally attached to the labor force. Those marginally attached to the labor force are individuals who were not in the labor force; wanted to work and were available to work; and had looked for a job sometime in the previous 12 months, but not in the 4 weeks preceding the survey. Hispanics and Asians were represented among the marginally attached nearly proportionately to their share of the labor force. Whites were underrepresented among the marginally attached relative to their share of the labor force: 77 percent of the labor force versus 67 percent of the marginally attached.

Blacks also made up a high proportion of discouraged workers (29 percent) relative to their share of the labor force. Discouraged workers, who represent a subset of the marginally attached, are people not currently looking for work because they believe that no jobs are available for them.

Earnings

Among the major race and ethnicity groups, Hispanics and Blacks continued to have considerably lower earnings than Whites and Asians. The median usual weekly earnings of full-time wage and salary workers in 2019 were \$706 for Hispanics, \$735 for Blacks, \$945 for Whites, and \$1,174 for Asians. The earnings for White men (\$1,036), Black men (\$769), and Hispanic men (\$747) were 78 percent, 58 percent, and 56 percent, respectively, of the earnings of Asian men (\$1,336). The median earnings of White women (\$840), Black women (\$704), and Hispanic women (\$642) were 82 percent, 69 percent, and 63 percent, respectively, of the earnings of Asian women (\$1,025). (These earnings comparisons are on a broad level and do not control for many factors that can be significant in explaining earnings differences, such as job skills and responsibilities, work experience, and specialization.) (See table 16.)

The earnings disparity across the major race and ethnicity groups for men holds for nearly all major occupational groups. For example, median usual weekly earnings of Asian men and White men working full time in management, professional, and related occupations (the highest paying major occupational group), at \$1,851 and \$1,549, respectively, were considerably higher than the earnings of Hispanic men (\$1,251) and Black men (\$1,174) in the same occupational group. (See table 18.)

Median weekly earnings for women by race and ethnicity groups were relatively close across a number of occupations. For example, among women in service occupations, the earnings were \$576 for Asians, \$540 for Whites, \$523 for Blacks, and \$511 for Hispanics. By contrast, in management, professional, and related occupations, the earnings of Asian women were considerably higher than those for women in other race and ethnicity groups.

Note: Beginning in 2003, estimates for White, Black or African American, Asian, American Indian and Alaska Native, and Native Hawaiian and Other Pacific Islander race groups include people who selected that race group only; people who selected more than one race group are included in the Two or More Races category. Prior to 2003, people who reported more than one race were included in the group they identified as the main race. Asian estimates for 2000-2002 are for Asians and Pacific Islanders; beginning in 2003, Asian is a separate category, as is Native Hawaiian and Other Pacific Islander. People whose ethnicity is identified as Hispanic or Latino may be of any race. Dash indicates data not available.

Note: Beginning in 2003, estimates for White, Black or African American, Asian, American Indian and Alaska Native, and Native Hawaiian and Other Pacific Islander race groups include people who selected that race group only; people who selected more than one race group are included in the Two or More Races category. Prior to 2003, people who reported more than one race were included in the group they identified as the main race. Asian estimates for 2000-2002 are for Asians and Pacific Islanders; beginning in 2003, Asian is a separate category, as is Native Hawaiian and Other Pacific Islander. People whose ethnicity is identified as Hispanic or Latino may be of any race. Dash indicates data not available.

Note: Beginning in 2003, estimates for White, Black or African American, and Asian race groups include people who selected that race group only; people who selected more than one race group are not included in these groups. Prior to 2003, people who reported more than one race were included in the group they identified as the main race. Asian estimates for 2000-2002 are for Asians and Pacific Islanders; beginning in 2003, Asian is a separate category. People whose ethnicity is identified as Hispanic or Latino may be of any race. Children are "own" children and include sons, daughters, stepchildren, and adopted children. Not included are nieces, nephews, grandchildren, and other related and unrelated children. Dash indicates data not available.

2019	6.1	6.5	5.6	3.2	3.3	3.2	5.3	5.4	5.2

Note: Beginning in 2003, estimates for White, Black or African American, Asian, American Indian and Alaska Native, and Native Hawaiian and Other Pacific Islander race groups include people who selected that race group only; people who selected more than one race group are included in the Two or More Races category. Prior to 2003, people who reported more than one race were included in the group they identified as the main race. Asian estimates for 2000-2002 are for Asians and Pacific Islanders; beginning in 2003, Asian is a separate category, as is Native Hawaiian and Other Pacific Islander. People whose ethnicity is identified as Hispanic or Latino may be of any race. Dash indicates data not available.

Footnotes

(1) Beginning in January 2011, this series reflects a change to the collection of data on unemployment duration. For more information, see <https://www.bls.gov/cps/duration.htm>.

Note: Estimates for the above race groups (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. People whose ethnicity is identified as Hispanic or Latino may be of any race.

55 years and older	1,834	3,372	93	25	22	8	14	3,280	

Footnotes

(1) The sum of the employed plus the unemployed.

(2) People marginally attached to the labor force are those who want a job, have searched for work during the prior 12 months, and were available to take a job during the reference week, but had not looked for work in the past 4 weeks.

(3) Discouraged workers are people marginally attached to the labor force who did not actively look for work in the prior 4 weeks for reasons such as thinks no work available, could not find work, lacks school or training, employer thinks too young or old, and other types of discrimination.

(4) Includes those who did not actively look for work in the prior 4 weeks for such reasons as childcare and transportation problems, as well as a small number for which reason nonparticipation was not ascertained.

Note: Estimates for the above race groups (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. People whose ethnicity is identified as Hispanic or Latino may be of any race.

2019	81.5	81.1	91.5	76.7	85.9

Note: Beginning in 2003, estimates for White, Black or African American, and Asian race groups include people who selected that race group only; people who selected more than one race group are not included in these groups. Prior to 2003, people who reported more than one race were included in the group they identified as the main race. Asian estimates for 2000-2002 are for Asians and Pacific Islanders; beginning in 2003, Asian is a separate category. People whose ethnicity is identified as Hispanic or Latino may be of any race. Dash indicates data not available.

Technical Notes

The estimates in this report were obtained from the Current Population Survey (CPS), a national monthly sample survey of approximately 60,000 eligible households that provides a wide range of information on the labor force, employment, and unemployment. Earnings data are collected from one-fourth of the CPS monthly sample. The survey is conducted for the U.S. Bureau of Labor Statistics (BLS) by the U.S. Census Bureau, using a scientifically selected national sample with coverage in all 50 states and the District of Columbia.

Material in this report is in the public domain and may be reproduced without permission.

Upon request, the information presented here is available to individuals who are sensory impaired. Voice phone: (202) 691-5200; Federal Relay Service: (800) 877-8339.

For more information on the data provided in this report, contact the U.S. Bureau of Labor Statistics, Division of Labor Force Statistics. Email: cpsinfo@bls.gov; Telephone: (202) 691-6378.

Concepts and definitions

The *civilian noninstitutional population* is made up of people 16 years of age and older residing in the 50 states and the District of Columbia who are not confined to institutions, such as nursing homes and prisons, and who are not on active duty in the Armed Forces.

The *employed* are people who, during the survey reference week (which is generally the week including the 12th day of the month), (a) did any work at all as paid employees; (b) worked in their own business or profession or on their own farm; or (c) worked 15 hours or more as unpaid workers in a family member's business. People who were temporarily absent from their jobs or businesses because of illness, vacation, a labor dispute, or some other reason also are counted as employed.

The *unemployed* are people who had no employment during the reference week, but were available for work (except if they had a temporary illness), and had made specific efforts to find employment sometime during the 4-week period ending with the reference week. People who were waiting to be recalled to a job from which they had been laid off need not have been looking for work to be classified as unemployed.

Duration of unemployment refers to the length of time (through the reference week) that people classified as unemployed had been looking for work. For people on layoff, the duration of unemployment is the number of full weeks they had been on layoff. Mean duration is the arithmetic average computed from single weeks of unemployment; median duration is the midpoint of a distribution of weeks of unemployment.

Reason for unemployment refers to the status of unemployed individuals at the time they began to look for work. The reasons for unemployment are divided into four major categories:

- *Job losers*, comprising (a) people on temporary layoff, who have been given a date to return to work or who expect to return within 6 months (people on layoff need not be looking for work to qualify as unemployed), (b) permanent job losers, whose employment ended involuntarily and who began looking for work, and (c) people who completed temporary jobs who began looking for work after the jobs ended.
- *Job leavers*, people who quit or otherwise terminated their employment voluntarily and immediately began looking for work.

- *Reentrants*, people who previously worked but who were out of the labor force prior to beginning their job search.
- *New entrants*, people who had never worked.

The *civilian labor force* includes all people classified as employed or unemployed in accordance with the criteria described above.

The *unemployment rate* represents the number of unemployed people as a percentage of the civilian labor force.

The *labor force participation rate* represents the number of people in the labor force as a percentage of the civilian noninstitutional population.

The *employment—population ratio* represents the number of employed people as a percentage of the civilian noninstitutional population.

People *not in the labor force* are those who are neither employed nor unemployed. People marginally attached to the labor force are those individuals who are not in the labor force but who wanted and were available for work and had looked for a job sometime in the previous 12 months (or since the end of their last job if they held one within the past 12 months). They were not counted as unemployed because they had not searched for work in the 4 weeks preceding the survey. Discouraged workers, a subset of the marginally attached, were not looking for work because they believed that no jobs were available for them.

Information on *occupation and industry* applies to the job held during the reference week. People with two or more jobs are classified into the occupation and industry in which they worked the greatest number of hours. The occupational and industry classification of CPS data is based on the 2010 Census occupational classification system and the 2012 Census industrial classification system, which are derived from the 2010 Standard Occupation Classification (SOC) and the 2012 North American Industry Classification (NAICS), respectively.¹

Race is reported by the household respondent. In accordance with Office of Management and Budget standards, White, Black or African American, Asian, American Indian and Alaska Native, and Native Hawaiian and Other Pacific Islander are terms used to describe a person's race. Beginning in 2003, people in these categories are those who selected that race group only. Those who identify multiple race groups are categorized as people of Two or More Races. (Previously, people identified a group as their main race.) People who identified themselves as Asian are further classified as Asian Indian, Chinese, Filipino, Japanese, Korean, Vietnamese, or Other Asian. The Other Asian category includes both individuals of groups not listed—such as Pakistani, Hmong, and Cambodian—and those who reported two or more Asian groups. Estimates for American Indians and Alaska Natives, Native Hawaiians and Other Pacific Islanders, and people of Two or More Races are not shown separately in all tables because the number of survey respondents is too small to develop estimates of publication quality.²

Hispanic or Latino ethnicity refers to people who identified themselves in the survey as being of Hispanic, Latino, or Spanish origin. These individuals are further classified by detailed Hispanic ethnicity. Previous versions of this report presented data for the following detailed Hispanic ethnicity categories: Mexican, Puerto Rican, Cuban, Central and South American, and Other Hispanic or Latino. The latter two categories were expanded in 2014 into additional categories: Central American, which includes the two subcategories of Salvadoran and Other Central American (excluding Salvadorans); South American; and Other Hispanic or Latino, which includes the two subcategories of

Dominican and Other Hispanic or Latino (excluding Dominicans). People whose ethnicity is identified as Hispanic or Latino may be of any race.³

Usual weekly earnings reflect earnings before taxes and other deductions, and include any overtime pay, commissions, or tips usually received (at the main job, in the case of multiple jobholders). Earnings reported on a basis other than weekly (for example, annual, monthly, or hourly) are converted to a weekly equivalent. The term “usual” is as perceived by the respondent. If the respondent asks for a definition of usual, interviewers are instructed to define the term as more than half the weeks worked during the past 4 or 5 months. Data refer to the sole or primary job of wage and salary workers (excluding all self-employed people, regardless of whether their businesses were incorporated).

The *median of usual weekly earnings* reflects the midpoint in a given earnings distribution, with half of workers having earnings above the median and the other having earnings below the median. The BLS procedure for estimating the median of a weekly earnings distribution places each reported or calculated weekly earnings value into a \$50-wide interval that is centered around a multiple of \$50. The median is calculated through the linear interpolation of the interval in which the median lies.

A *family* is a group of two or more people residing together who are related by birth, marriage, or adoption; all such people are considered members of one family. The race or ethnicity of families is determined by that of the householder: the person, or one of the people, in whose name the housing unit is owned or rented. The count of families is for “primary” families only—that is, the householder and all other people related to and residing with the householder. Families comprise those without children as well as those with children under 18 years and are defined as follows:

- *Married-couple families* refer to opposite-sex married couples only.
- *Families maintained by women* and *families maintained by men* are each made up of householders residing with one or more family members, but not an opposite-sex spouse. The household may or may not include a same-sex spouse or an unmarried domestic partner (of either sex).
- *Children* refer to one’s own children under age 18 who live in the household. Included are sons, daughters, stepchildren, and adopted children. Not included are nieces, nephews, grandchildren, other related children, and all unrelated children living in the household.

Reliability of the estimates

Statistics based on the CPS are subject to both *sampling error* and *nonsampling error*. When a sample, rather than an entire population, is surveyed, there is a chance that the sample estimates may differ from the true population values they represent. The component of this difference that occurs because samples differ by chance is known as sampling error, and its variability is measured by the standard error of the estimate. There is about a 90-percent chance, or level of confidence, that an estimate based on a sample will differ by no more than 1.6 standard errors from the true population value because of sampling error. BLS analyses are generally conducted at the 90-percent level of confidence.

All other types of error are referred to as nonsampling error. Nonsampling error can occur for many reasons, including the failure to sample a segment of the population, inability to obtain information from all respondents in the sample, inability or unwillingness of respondents to provide correct information, and errors made in the collection or processing of data.⁴

¹ Additional information about these classifications is available online; see “Historical comparability of occupation and industry data from the Current Population Survey,” Labor force statistics from the Current Population Survey (U.S. Bureau of Labor Statistics, March 30, 2018), www.bls.gov/cps/cpsoccind.htm.

² More information on the 2003 changes to questions on race and Hispanic ethnicity is available on the BLS website; see Mary Bowler, Randy E. Ilg, Stephen Miller, Ed Robison, and Anne Polivka, “Revisions to the Current Population Survey Effective in January 2003” (U.S. Bureau of Labor Statistics), www.bls.gov/cps/rvcps03.pdf.
